Melon Sapo Orange Flesh

New arrival in the PIEL DE SAPO melons with ORANGE FLESH. In addition to the exclusive orange flesh color, this variety is noted for its great homogeneity in shapes and sizes, its good adaptation both to early cultivations in greenhouse and late cultivations in open field during midsummer. The rind has a typical netting of the traditional piel de sapo melons which appears in its optimum state of maturity. The flesh is crunchy with excellent organoleptic quality and very good conservation. The average weight is between 1.5-2 kg in early cultivations until 4-5 kg in late cultivations in midsummer.

(*) These data were obtained from numerous trials in different areas. They must not be taken as an accurate guide of product performance in orther particular conditions because results could vary according to the weather, growing conditions and disease pressure conditions and disease pressure.
